ABSTRACT

This paper investigates six possible *SLAs* which are run for the evaluation trials developed at the AWMP Intersessional Workshop (IWC, 2015). Candidates are presented ranging from providing complete satisfaction of the conservation performance criterion for all evaluation trials, to alternatives that sacrifice performance on this count to increasing extents for improved need satisfaction. Need is better satisfied over the first 20 years than over 100 years for these *SLAs* in these trials.

INTRODUCTION

This paper provides results from the application of the software developed by Andre Punt for the West Greenland fin whale trials, as agreed at the AWMP Intersessional Workshop (IWC, 2015), to six potential *SLAs*.

The *SLAs* considered here are tuned to all 63 evaluation trials to achieve the conservation performance and need satisfaction criteria.

SLAs CONSIDERED

Six *SLAs* are considered in this paper. Two of these formed part of the ‘reference *SLAs*’ as given in IWC (2012) and are included here for a comprehensive coverage of the *SLAs* considered, while the four others are variants of another one of these ‘reference *SLAs*’.

SLA1: Interim *SLA* which sets the *Strike Limit* as the lesser of need and $0.02\hat{N}e^{-1.645CV}$

where \hat{N} is the most recent estimate of abundance and CV is the coefficient of variation of \hat{N} .

SLA2: Weighted-average interim *SLA* which uses all the abundance estimates and replaces \hat{N} and CV in *SLA1* by:

$$\hat{N} = \exp \left[\frac{\sum_i \frac{0.9^{t_i} \ln N_i}{CV_i^2}}{\sum_i \frac{0.9^{t_i}}{CV_i^2}} \right] \quad (1)$$

$$CV = \sqrt{\frac{\sum_i \frac{0.9^{2t_i}}{CV_i^2}}{\sum_i \frac{0.9^{t_i}}{CV_i^2}}} \quad (2)$$

where N_i is the i th estimate of abundance, CV_i is the coefficient of variation of N_i , and t_i is the time (in years) between when the i th estimate of abundance was obtained and the first year of the block for which a *Strike Limit* is needed.

SLA3: Variant of *SLA2* described above. This variant adjusts the 0.02 multiplier applied to \hat{N} as in *SLA2* by a function of the observed trend of the abundance indices, so that the *Strike Limit* is set as the lesser of need and $\varphi f(\beta^*) \hat{N} e^{-1.645CV}$, where

$$f(\beta^*) = \alpha + (1 - \alpha) \frac{1}{1 + e^{(\beta^* - \bar{\beta})/\delta}},$$

where

$\beta^* = \hat{\beta} - \lambda s_{\hat{\beta}}$, where $\hat{\beta}$ is the negative of the slope of the log-linear regression applied to the abundance indices, $s_{\hat{\beta}}$ is the standard error of the slope coefficient and λ is a control parameter, and $\alpha, \bar{\beta}, \varphi$ and δ are further control parameters.

For this variant the following values are chosen for the control parameters:

$\alpha = 0.1, \bar{\beta} = 0.003, \delta = 0.005/3, \varphi = 0.03$ and $\lambda = 3$. The function $f(\beta^*)$ is calculated only if there are more than three abundance indices, otherwise it is set to 1.

SLA4: Variant of *SLA3* described above. In this variant the control parameters are set to:

$$\alpha = 0.2, \bar{\beta} = 0.005, \delta = 0.005/3, \varphi = 0.02 \text{ and } \lambda = 2.$$

SLA5: Variant of *SLA3* described above. In this variant the control parameters are set to:

$$\alpha = 0.7, \bar{\beta} = 0.005, \delta = 0.008, \varphi = 0.014 \text{ and } \lambda = 3.$$

SLA6: Variant of *SLA3* described above. In this variant the control parameters are set to:

$$\alpha = 0.7, \bar{\beta} = 0.005, \delta = 0.008, \varphi = 0.007 \text{ and } \lambda = 3.$$

RESULTS AND DISCUSSION

Table 1 gives a summary of the results in terms of conservation performance (defined by the D10 statistic: relative increase of 1+ population size: P_T/P_0 , where P is the size of the total 1+ population) and need satisfaction criteria (defined by the N9 statistic: Average need satisfaction given by $\frac{1}{T} \sum_{t=0}^{T-1} \frac{C_t}{Q_t}$, where

C is catch and Q is the need) in the same manner as reported in IWC (2014) for the evaluation trials for the *SLAs* considered. A further statistic is reported in Table 1 that was not given previously: the proportion of times that each *SLA* achieves need satisfaction (N9 over 20 and 100 years) above 0.75 at the lower 5%-ile for these fin whale evaluation trials. Note that Appendix A gives details of all the trials and need envelopes considered. Note that in IWC (2015), the values for survey frequency between Table 5 and Table 6 do not match. The results presented in this paper have assumed the values given in Table 5.

SLA6 was selected so that the requisite conservation performance would be achieved for all the evaluation trials. This is achieved at the expense of meeting need satisfaction, with a worse performance in need satisfaction over a 100 year period. *SLA5* achieves better need satisfaction with a slight decrease

in conservation performance. However, the required conservation performance is achieved for $MSYR_{1+}=2.5\%$ and 4% evaluation trials.

Figure 1 shows the proportion of times that each *SLA* meets the conservation performance criteria vs the mean need satisfaction (over 20 and 100 years) for various *SLAs* for the $MSYR_{1+}=2.5\%$ evaluation trials, while Figure 2 shows these results for the $MSYR_{1+}=4\%$ evaluation trials. For all variants, need satisfaction tends to be better for the first 20 years compared to a longer period.

ACKNOWLEDGMENT

We thank the IWC for financial support for this work, and Andre Punt for developing the code for the trials.

GF03CC	MSYR ₁₊ = 1%; need scenario C; survey frequency = 18; historic survey bias = 1	1C
GF04AA	MSYR ₁₊ = 4%; need scenario A; survey frequency = 12; historic survey bias = 0.8	Yes [4A]
GF04AB	MSYR ₁₊ = 4%; need scenario B; survey frequency = 12; historic survey bias = 0.8	4A
GF04AC	MSYR ₁₊ = 4%; need scenario C; survey frequency = 12; historic survey bias = 0.8	4A
GF04BA	MSYR ₁₊ = 2.5%; need scenario A; survey frequency = 12; historic survey bias = 0.8	Yes [4B]
GF04BB	MSYR ₁₊ = 2.5%; need scenario B; survey frequency = 12; historic survey bias = 0.8	4B
GF04BC	MSYR ₁₊ = 2.5%; need scenario C; survey frequency = 12; historic survey bias = 0.8	4B
GF05AA	MSYR ₁₊ = 4%; need scenario A; survey frequency = 12; historic survey bias = 1.2	Yes [5A]
GF05AB	MSYR ₁₊ = 4%; need scenario B; survey frequency = 12; historic survey bias = 1.2	5A
GF05AC	MSYR ₁₊ = 4%; need scenario C; survey frequency = 12; historic survey bias = 1.2	5A
GF05BA	MSYR ₁₊ = 2.5%; need scenario A; survey frequency = 12; historic survey bias = 1.2	Yes [5B]
GF05BB	MSYR ₁₊ = 2.5%; need scenario B; survey frequency = 12; historic survey bias = 1.2	5B
GF05BC	MSYR ₁₊ = 2.5%; need scenario C; survey frequency = 12; historic survey bias = 1.2	5B
GF06AA	MSYR ₁₊ = 4%; need scenario A; survey frequency = 12; historic survey bias = 1; 3 episodic events	1A
GF06AB	MSYR ₁₊ = 4%; need scenario B; survey frequency = 12; historic survey bias = 1; 3 episodic events	1A
GF06AC	MSYR ₁₊ = 4%; need scenario C; survey frequency = 12; historic survey bias = 1; 3 episodic events	1A

GF06BA	MSYR ₁₊ = 2.5%; need scenario A; survey frequency = 12; historic survey bias = 1; 3 episodic events	1B
GF06BB	MSYR ₁₊ = 2.5%; need scenario B; survey frequency = 12; historic survey bias = 1; 3 episodic events	1B
GF06BC	MSYR ₁₊ = 2.5%; need scenario C; survey frequency = 12; historic survey bias = 1; 3 episodic events	1B
GF06AA	MSYR ₁₊ = 2.5%; need scenario A; survey frequency = 12; historic survey bias = 1; stochastic events every 5 years	1A
GF06CA	MSYR ₁₊ = 1%; need scenario A; survey frequency = 12; historic survey bias = 1; 3 episodic events	1C
GF06CB	MSYR ₁₊ = 1%; need scenario B; survey frequency = 12; historic survey bias = 1; 3 episodic events	1C
GF06CC	MSYR ₁₊ = 1%; need scenario C; survey frequency = 12; historic survey bias = 1; 3 episodic events	1C
GF07AA	MSYR ₁₊ = 4%; need scenario A; survey frequency = 12; historic survey bias = 1; stochastic events every 5 years	1A
GF07AB	MSYR ₁₊ = 4%; need scenario B; survey frequency = 12; historic survey bias = 1; stochastic events every 5 years	1A
GF07AC	MSYR ₁₊ = 4%; need scenario C; survey frequency = 12; historic survey bias = 1; stochastic events every 5 years	1A
GF07BA	MSYR ₁₊ = 2.5%; need scenario A; survey frequency = 12; historic survey bias = 1; stochastic events every 5 years	1B
GF07BB	MSYR ₁₊ = 2.5%; need scenario B; survey frequency = 12; historic survey bias = 1; stochastic events every 5 years	1B
GF07BC	MSYR ₁₊ = 2.5%; need scenario C; survey frequency = 12; historic survey bias = 1; stochastic events every 5 years	1B
GF08AA	MSYR ₁₊ = 4%; need scenario A; survey frequency = 12; historic survey bias = 1; asymmetric environmental stochasticity (depletion = 0.3)	Yes [1A,8A]
GF08AB	MSYR ₁₊ = 4%; need scenario B; survey frequency = 12; historic survey bias = 1; asymmetric environmental stochasticity (depletion = 0.3)	8A
GF08AC	MSYR ₁₊ = 4%; need scenario C; survey frequency = 12; historic survey bias = 1; asymmetric environmental stochasticity (depletion = 0.3)	8A
GF08BA	MSYR ₁₊ = 2.5%; need scenario A; survey frequency = 12; historic survey bias = 1; asymmetric environmental stochasticity (depletion = 0.3)	Yes [1B,8B]
GF08BB	MSYR ₁₊ = 2.5%; need scenario B; survey frequency = 12; historic survey bias = 1; asymmetric environmental stochasticity (depletion = 0.3)	8B
GF08BC	MSYR ₁₊ = 2.5%; need scenario C; survey frequency = 12; historic survey bias = 1; asymmetric environmental stochasticity (depletion = 0.3)	8B
GF08CA	MSYR ₁₊ = 1%; need scenario A; survey frequency = 12; historic survey bias = 1; asymmetric environmental stochasticity (depletion = 0.3)	Yes [1C,8C]
GF08CB	MSYR ₁₊ = 1%; need scenario B; survey frequency = 12; historic survey bias = 1; asymmetric environmental stochasticity (depletion = 0.3)	8C
GF08CC	MSYR ₁₊ = 1%; need scenario C; survey frequency = 12; historic survey bias = 1; asymmetric environmental stochasticity (depletion = 0.3)	8C

Description of the different need scenarios (see IWC, 2015, Table 5) for fin whales off West Greenland.

Need scenario	Description
A	19 -> 19 over 100 years
B	19 -> 38 over 100 years
C	19 -> 57 over 100 years
